Education

Kennesaw State University, Kennesaw, GA

M.S. in Data Science and Analytics

2024 – 2026

GPA: 3.9/4.0

Framingham State University, Framingham, MA

B.S. in Computer Science (Information Systems)

2020 – 2024

GPA: 3.65/4.0

Skills

Technical Skills: Python, RStudio, SQL, Machine Learning, Tableau, Jupyter Notebook, Excel, Java

Soft Skills: Project Management, Cross-functional Leadership, Analytical Storytelling, Stakeholder Communication, Executive Presentation

Experience

NCI SEERMED Cancer Claims Research – Marietta, GA

Jan 2025 – May 2026

Lead Data Scientist

- Utilized SQL and Machine Learning to find trends based on patient race, age, sex, region, and cancer stage
- Built a relational database with 422 tables in MariaDB and utilized SQL to streamline clinical data access.
- Presented analytical insights in biweekly strategy meetings to research leads.
- Conducted quality assurance and code reviews.

Microf – Marietta, GA

Aug 2025 – Dec 2025

Lead Data Scientist - Company Sponsored Data Science Project

- Developed and evaluated multiple ML models boasting a final model accuracy of 33% (Linear Regression, XGBoost, KNN, Random Forest, SVM, Ensemble) to forecast seasonal payment collection trends.
- Led a 5-member analytics team to win 1st place for best machine learning model.
- Monitored team performance, set goals, assigned tasks and deadlines, solved problems, handled team conflicts as a team lead.
- Used time-series analysis to improve forecasting accuracy and presented comparative model performance to executives.

MetroWest Economic Research Center – Framingham, MA

Jan 2024 – May 2024

Data Analyst Intern

- Developed Tableau dashboards visualizing regional employment trends with KPIs and filters from Mass.gov public data.
- Cleaned and processed longitudinal data on unemployment, revenue, & census statistics.
- Created Excel visualizations and interpretive reports for publication.

Projects

COVID-19 Dashboard

- Cleaned public CDC COVID-19 Data in Excel and SQL.
- Queried 50K+ records with joins, CTEs, and views in SQL.
- Developed interactive executive dashboard summarizing deaths and geographic trends.

CDC Diabetes Factors

- Evaluated health and lifestyle predictors with General, Binomial, and Ordinal Regression.
- Created heatmaps, scatter plots, and correlation visualizations.
- Presented findings to professionals at Analytics Day, Kennesaw State University.

Cardio Vascular Disease

- Built and evaluated multiple binary classification models in RStudio to predict heart disease.
- Created logistic regression and implemented XGBoost and Support Vector Machines for better performance and accuracy.
- Evaluated performance using ROC-AUC, F1 score, and cross-validation.

Diabetes Prediction

- Predicted diabetes risk on 400K+ CDC records using logistic regression.
- Used Variance Inflation Factors to remove multicollinearity for a more accurate and cleaner model.
- Evaluated performance using ROC-AUC, RMSE, MAE.
- Visualized insights and created scatter plots, and heat maps using Tidyverse and GGplot2.
